Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                         This is the uridine-binding motif of yeast dUTPase. Sequences are provided (see ANW72849-57) of the uridine-binding motifs of the dUTPases and dCTP deaminases of Pyrococcus furiosus (see also Escherichia coli, yeast, human and herpesvirus; a consensus (see ANW72843) is also provided. A claimed method of enhancing a nucleic acid polymerase reaction comprises performing the reaction in the presence of one or more of the following: a polymerase enhancing protein having one or more of the following: a polymerase enhancing protein having one or more of the sequences provided in ANW72848-57. Sequences pivon in ANW72848-57. Kits are provided for replicating sequences given in ANW72848-57. Kits are provided for replicating sequencing or for site-directed mutagenesis, for nucleic acid sequencing or for amplification (preferably PCR or RT-PCR).

which represent the human ORFX open reading frames 1 to 3161. The ORFX which represent the human ORFX open reading frames 1 to 3161. The ORFX acquences have activities such as: cytostatic; hepatotropic; vulnerary; antipportiatic; antiportiant; antiartitic; immunosuppressant; immunosuppressant; immunosuppressant; immunosuppressant; immunosuppressant; antidiabetic; hypotensive; dermatological; immunosuppressant; antidiabetic; hypotensive; dermatological; antidiabetic; hypotensive; dermatological; antidiabetic; hypotensive; dermatological; antidiabetic; predisposition to, or preventing or treating pathological conditions associated with an ORFX associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy; or politicative disorders, neurodegenerative disorders, neurodegenerative disorders, neurodegenerative disorders, osteoarthitis, graft vs host disease, cardiovascular disease, osteoarthitis, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus cryterial or fungal infection, malaria, autoimmune disorders, asthma, allories, benefit and cartilage damage, nocturnal haemoglobinuria, antilifanmatory disease; to enhance compliant in thrombosis; and as contraceptive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
Novel nucleic acids and peptides derived from open reading frame X, sasful for treating e.g. cancers, proliferative disorders, neurodegenerative disorders and cardiovascular disease -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nitrate reductase; NarG; nitrite reductase; nitrate reduction; nitrite reduction; pollutant; biotransformation; water treatment; vegetable.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ouery Match

Recombinant S. carnosus nitrate and nitrite reductase proteins - useful for reducing nitrate and nitrite in nitrate-polluted material
                                                                        This protein comprises the G subunit of nitrate reductase NarGHJ encoded by nuclectides 4140-7814 of an isolated nitrite reductase and nitrate reductase gene region (see AAT99449) of Staphylococus carnosus. The invention relates to recombinant proteins (see AAW26733-49) involved in the reduction of nitrate and nitrite in Scarnosus, and the use of these proteins, or cells enroding them, in free or immumobilised form to reduce nitrate and nitrite in water, vegetables and other nitrate and/or nitrite polluted

ö
expression of Staphylococcal genes. The DNA sequence is also useful as a source of regulatory elements for the control of bacterial gene expression. The present protein may be used to produce vaccines to enable a host to produce specific antibodies with antibacterial action. These vaccines and antibodies would protect a host against invasion by S. aureus, and conditions relating to Staphylococcal infection, e.g. Staphylococcal food poisoning, scaled skin syndrome, and toxic shock
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence is a H. pylori outer membrane protein.

The protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors. The genomic sequence of H. pylori (ATCC 55679) was determined from overlapping contigs generated by mechanically shearing the bacterial and the predicted coding regions defined by computer evaluation. To identify likely H. pylori artigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant beneated to to the known or exported membrane proteins. Having identified
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cytoplasmic, vaccine; prevention; treatment; infection; identification; binding compound; bacterium; life cycle; activator; bacteria; inhibitor; duodenal ulcer disease; chronic gastritis; diagnosis; envelope.

MurA polypeptide expressed in a patient. MurA polypeptide and polymorphisms and polymorphisms and drugs against infection from micro-organisms. MurA agonists and antagonists are bacteriostatic and bacteriocidal compounds which can be used in treatment to enhance or block MurA activity, therefore treating bacterial infections, especially by Staphylococcus aureus which causes bacteremia in cancer patients, osteomyelitis, septic arthritis, septic thrombophlabitis, cutte bacterial endocarditis, toxic shock syndrome, scalded skin solymorphisms and polymucleotides are useful immunogens for producing anti-MurA antibodies for prevention of bacterial infections.
                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                     Staphyloccus aureus MurA protein fragment from open reading frame.

MurA polypeptide expressed in a patient. MurA polypeptide and advantage in a patient. MurA antagonists, agonists and drugs against infection from micro-organisms. MurA agonists and antagonists are bacteriostatic and bacteriocidal compounds which can be used in treatment to enhance or block MurA activity. therefore treating bacterial infections or block MurA activity, therefore treating bacterial infections, patients, osteomyelitis, septic arthritis, septic thrombophlebitis, acute bacterial endocarditis, toxic shock syndrome, scalded skin syndrome and Staphylococcal food poisoning. Epitopes of MurA polypeptides and polynucleotides are useful immunogens for producing anti-MurA antibodies for prevention of bacterial infections.

The present sequence is a MurA protein from Staphylococous aureus genomic DNA library. The protein has UDP-N-acetylglucosamine 1-carboxyvinyltransferase activity.

The present sequence is useful in preparation of vaccines for prevention or attenuation of Staphylococcal infections (especially Saureus infections) which may cause conditions such as neonatal conjunctivitis, osteomyelitis, skin infections and toxic shock syndrome. The present sequence is also useful for detecting Staphylococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Staphylococcus aureus polypeptide useful for preventing or attenuating a Staphylococcal infection comprises one of 32 sequences of 100-1277 amino acids or their fragments

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is a MurA protein from Staphylococcus aureus genomic DNA library. The protein has UDP-N-acety1glucosamine 1-carboxyvinyltransferase activity. The present sequence is useful in preparation of vaccines for prevention or attenuation of Staphylococcal infections (especially S.aureus infections) which may cause conditions such as neonatal conjunctivitis, osteomyelitis, skin infections and toxic shock syndrome. The present sequence is also useful for detecting Staphylococcal infections in blological samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Staphylococcus aureus polypeptide useful for preventing or attenuating a Staphylococcal infection comprises one of 32 sequences of 100-1277 amino acids or their fragments

                                                                                                                                                                                                           AAX91536 to AAX91801 encode two hundred and sixty six antigenic borphorymonas gingivalis (PG) polypeptide sequences given in AAX94318 to AAX91802 to AAX91809 represent PCR primers used in the isolation of the PG polypeptides. The PG polypeptides have antibacterial extivity with a vaccine mechanism of action. The PG polypeptides can be used as vaccines especially against Porphorymonas gingivalis. Probes can be used to detect Porphorymonas gingivalis in standard hybridisation assays. Porphorymonas gingivalis is involved in periodontal disease

AAX91536 to AAX91801 encode two hundred and sixty six antigenic borphorymonas gingivalis (PG) polypeptide sequences given in AAX34318 to AAX34583. AAX91802 to AAX91899 represent PCR primers used in the isolation of the PG polypeptides. The PG polypeptides have antibacterial activity with a vaccine mechanism of action. The PG polypeptides can be used as vaccines especially against Porphorymonas gingivalis. Probes can be used to detect Porphorymonas gingivalis in standard hybridisation assays. Porphorymonas gingivalis is involved in periodontal disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cerebral tumour

The method comparises administering a peptide derived from the generic formula (AAW25691). The peptide is labelled with a radioactive metal isotope, a paramagnetic metal atom or a radioactive halogen isotope. The human is subjected to external imaging by radioactive scanning or by magnetic resonance imaging (MRI), to determine the targeted sites in the body in relation to the background activity, in order to allow detection and localisation of the tumours in the body.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Labelled cholecystokinin analogue 2 (CCK 25-33) for detecting tumours.

The present invention relates to peptides showing cholecystokinin (CCK)-8 extivity, which can be used to treat neuropathies in the peripheral nervous system (PNS). The present sequence is one such peptide. The peptides of the present invention may be used to treat neuropathies in the PNS associated with diabetes mellitus, cancer treatment such as cytostatica, hearing impairment and/or visual handicap, alcohol-induced neuropathy, damage induced by surgery and dystrophy.
                                                                                                                                                                                           Antidiabetic; cytostatic; auditory; cholecystokinin-8; CCK-8; neuropathy; peripheral nervous system; diabetees mellitus; cancer treatment; cytostatica; hearing impairment; visual handicap; alcohol-induced neuropathy; dystrophy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Manufacturing a medicament for treating neuropathies in the peripheral nervous system comprises use of a substance showing cholecystokinin-8 activity -
                                                                                                                                                                    Cholecystokinin peptide fragment analogue #33.
                                                                                                                                                                                                                                                                                                                                                                                                                     /note= "C-terminal amide"
                                                                                                                                                                                                                                                                                                                                        'note- "Tyr-(S03Ba1/2)"
                                                                                                                                                                                                                                                                                      Location/Qualifiers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 26,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               US-06-822774-55
Sequence 55, Application US/08822774
Patent No. 6183997
GENERAL INFORMATION:
APPLICANT: HOGREFE, Holly
TITLE OF INVENTION: Extracts, PEF Protein Complexes, Isola
TITLE OF INVENTION: Extracts, PEF Protein Complexes, Isola
TITLE OF INVENTION: Extracts, PEF Protein Complexes, Isola
TITLE OF INVENTION: and Methods for Purifying and Identify
NUMBER OF SEQUENCES: 61
CORRESPONDENCE ADDRESS:
ADDRESSEE: Lenahan, P.L.L.C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 14;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
COPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.25

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                   This is the uridine-binding motif of the dCTP deaminase of methanococus jannaschii. Sequences are provided (see AMW72849-57) of the uridine-binding motifs of dUTPases and dCTP deaminases of pyrococcus furiosus (see AAW72847), Methanococcus jannaschii, Desulfutolobus amblvalhans, Escherichia colli, yeast, human and herpesvirus; a consensus (see AAW72848) is also provided. A claimed herpesvirus; a consensus (see AAW72848) is also provided. A claimed method of enhancing a nucleic acid polymerase reaction comprises performing the reaction in the presence of one or more of the collination that turns-over dUTP and a protein having one or more of the sequences provided in AAW72848-57. A claimed protein having per activity comprises one or more of sequences given in AAW72848-57. (Kits are provided for replicating nucleic acids, for site-directed mutagenesis, for nucleic acid sequencing or for amplification (preferably PCR or RT-PCR).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Breast and ovarian cancer associated antigen protein sequence SEQ ID 780.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; breast cancer; ovarian cancer; cytostatic; immunosuppressive; nootropic; neurpprotective; antiviral; antiallergic; hepatotropic; antiinflammatory; antiulcer; vulnerary; anticonvulsant; antibbecterial; antifungal; antiparasitic; cardiant; immune disorder; Addison's disease; allergy; autoimmune haemolytic anaemia; autoimmune thyroiditis; diabetes mellitus; Crohn's disease; multiple sclerosis; rheumatoid arthritis; ulcerative colitis; cardiovascular disorder; wound healing; neurological disease.

Sequences AAF21614 - AAF22031 represent DNA sequences encoding human proteins AAB58128. The DNA and protein sequences are associated with breast and ovarian cancer. Included in the invention are sequences AAF22032 - AAF22040 and AAB59129 which are used in the isolation and characterisation of the DNA and protein sequences of the invention. The breast and ovarian cancer associated DNA, protein, agonist constraint sequences exhibit cytostatic; immunosuppressive; constraint sequences exhibit cytostatic; immunosuppressive; constraint antifungal; antifuncer; unlearing; hepatotropic; antidabetic; antifungal; antifuncer; vulnerary; anticonvulsant; antidabetic; antifungal; antifuncer; when the diagnosis of cancer, convincedide and protein sequences are used in the diagnosis; and ovarian cancer. The nucleic acid sequences, proteins, agonists and agonists may also be used in the diagnosis, allergies, autoimmune haemolytic anaemia, autoimmune themolytic anaemia, autoimmune themolytic anaemia, autoimmune themolytic anaemia, autoimmune themolytic anaemia, autoimmune themolytics arthuitis and ulcerative colitis; cardiovascular disorders such as myocardial ischaemias; wound healing; neurological diseases such as crebral anoxia and epilepsy; and infectious diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acids encoding conserved essential genes involved in bacterial replication which are potential targets for the treatment of antibiotic resistant bacterial infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to nucleic acids (AAH90701-AAH90918) encoding polypeptides (AAM01002-AAM01114), which are essential for the viability of a bacterial cell wall. The acronym CFE stands for "CEG For

Expression", where CEG stands for "Conserved Essential Gene". The nucleic acids are useful for detecting the presence of proteins essential for the viability of a bacterial cell wall in samples such as cells, tissues, biological fluids, blood, serum, nose, ear or throat swabs with ligands, and for detecting corresponding target nucleic acid molecules with complementary sequences. The nucleic acids are also useful for determining whether a genomic nuclectide sequence of interest is essential for viability of a bacterial cell or whether it resides within an open peron, by integrating an exogeneous nucleotide sequence comprising a portion of an open reading frame of the genomic sequence of interest comprising 200-500 base pairs) into the genomic sequence of interest which confers a selection agent such as chloramphenicol. The nucleic acids and proteins are also useful as vaccines and for treating bacterial infections with gene therapy and antisease therapy. The nucleic acids also enable identification of targets sultable for the treatment of antibiotic resistant bacterial infections.

AAF71753 to AAF72330 encode the Corynebacterium glutamicum metabolic pathway (MP) proteins given in AAB79634 to AAB80211. The C. glutamicum MP nucleic acids are useful for the production of fine chemicals in microorganisms, including organic acids, nonproteinogenic amino acids, purine and pyrimidine bases, nucleosides, nucleotides, lipids, saturated and unsaturated fatty acids, diols, carbohydrates, aromatic compounds, vitamins, cofactors, polyketides and enzymes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       pathway proteins, useful for producing fine chemicals in microorganisms, including organic acids, nonproteinogenic amino acids, and purine and pyrimidine bases -

                                                                                mutant.
 The present invention provides a number of nucleotide and protein are asequences from the Corynetorm bacterium Corynebacterium glutamicum. These sequences from the Corynetorm bacterium, measuring expression amount and manalysing the expression profile or expression amount and amalysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium, coryneform bacterium, and identifying a homologue of a gene derived amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed because and organic acids where the sequence data for this patent did not form part of the printed because and the present expensive form and the printed because the control of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                     Mizoguchi H, Ando S, Hayashi M, Ochiai K, Yokoi H;

The present invention describes transmembrane receptors, preferably human G protein coupled receptors (GPCR), for which the endogenous ligand is unknown (orphan GPCR receptors). More specifically the present invention relates to non-endogenous, constitutively activated versions of a human GPCR. These non-endogenous constitutively activated versions the direct identification of candidate compounds as receptors agonists, inverse agonists or partial agonists for use as pharmaceutical agents. AAA46017 to AAA46126 and AAB02825 to AAB028859 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

The present invention describes primer sets for synthesising 5602
full-length cDNAs defined in the specification. Where a primer set
comprises: (a) an oligo-dT primer and an oligonucleotide complementary
to the complementary strand of a polynucleotide which comprises one of
the 5602 nucleotide sequences defined in the specification, where the
coligonucleotide comprises at least 15 nucleotides; or (b) a combination
of an oligonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
sequence and an oligonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 3'-end sequence.
Complementary strand of a polynucleotide which comprises a feat of
sequence and an oligonucleotide comprises a sidence of
sequence complementary to the
oligonucleotide which comprises a 1'-end sequence, where the
oligonucleotide comprises at least 15 nucleotides and the combination of
the 5'-end sequence/3'-end sequence is selected from those defined in
the 5'-end sequence/3'-end sequence is selected from those defined in
in gene therapy. The primers are useful for synthesising polynucleotides,
particularly full-length cDNAs. The primers are also useful for the
connas seasily without any specialised methods. AAH03166 to AAH13628 and
AAH13633 to AAH18724 represent human cDNA sequences; AAH3640 to
AAH13633 to AAH18742 represent human cDNA sequences; AAH3620 to AAH13620 to A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNas defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; primer; detection; diagnosis; antisense therapy; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Yamamoto J;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             sogai T, Nishikawa T, Hayashi K, Saito K, Ya

The present invention describes primer sets for synthesising 5602

(ull-length cDNAs defined in the specification. Where a primer set

comprises: (a) an oligo-dT primer and an oligonucleotide complementary

to the complementary strand of a polynucleotide which comprises one of

the 5602 nucleotide comprises at least 15 nucleotides; or (b) a combination

oligonucleotide comprises at least 15 nucleotides; or (b) a combination

of an oligonucleotide comprising a sequence complementary to the

complementary strand of a polynucleotide which comprises a 5'-end

sequence and an oligonucleotide comprising a sequence complementary to a

polynucleotide which comprises at 3'-end sequence, where the

oligonucleotide which comprises at 3'-end sequence, where the

oligonucleotide which comprises at selected from those defined in

the specification. The primer sets can be used in antisense therapy and

in gene therapy. The primers are useful for synthesising polynucleotides,

particularly full-length cDNAs. The primers are also useful for the

connection and/or diagnosis of the abnormality of the proteins encoded by

the full-length cDNAs. The primers allow obtaining of the full-length

cDNAs easily without any specialised methods. AAH03629 to AAH13632

AAH13633 to AAH13642 to AAH13632

represent clingonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; primer; detection; diagnosis; antisense therapy; gene therapy.

Where a primer set comprises: (a) an oligo-dr primer and an oligonucleotide complementary primer and an oligonucleotide complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence complementary to a polynucleotide which comprises a 3'-end sequence complementary to a polynucleotide which comprises a 1'-end sequence of an end of a sequence of the compination of the specification. The primers are useful for synthesising polynucleotides, nationary full-length convas are useful for synthesising polynucleotides, particularly full-length convas. The primers are useful for synthesising polynucleotides, particularly full-length convas. The primers are also useful for the full-length convas. The primers are also useful for she full-length convas. The primers allow obtaining of the proteins encoded by the full-length convas. The primers allow obtaining of the full-length convas. The primers allow obtaining of the full-length convas. The primers allow obtaining of the proteins and AAH13629 to AAH13629 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13633 to AAH13633 to AAH13633 to AAH13633 to AAH13633 to AAH13633 to AAH13633 to AAH13633 to AAH13633 to AA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention relates to an isolated membrane-bound sorbitol enchydrogenase (SDH) from Gluconobacter oxydans. The invention includes polynucleotides (AAC81153 - AAC81154) encoding the 3 subunits of SDH (AAB35987 - AAB35989). Also included in the invention are two polynucleotide sequences AAC81156 and AAC81157 which contain the subunit coding regions. The sorbitol dehydrogenase polynucleotide sequences are useful for producing L-sorbose from D-sorbitol and for increasing the production of 2 Keto-L-gulonic acid by transforming a host cell, especially Gluconobacter with the DNA and selecting the transformed host cell. The present sequence represents the SDH subunit 2 internal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
